## Treatment Options for Overweight Children and Teens

### Family Achievement Center

Physical, Occupational & Speech Therapies

## Treatment Options for Overweight Children and Teens

### *Options for Kids and Teens*

Family Achievement Center (FAC), a multidisciplinary outpatient clinic, provides treatment options for children, teens and young adults struggling with weight challenges.

In many cases, children and adolescents who are overweight or obese may also have gross motor delays that can be evaluated and treated by our therapists. These children often receive below-average test scores in gross motor skills testing.

### *Solutions with Physical Therapy*

We can perform a physical therapy evaluation to see if your child would be eligible for physical therapy to improve his/her balance, strength and coordination.

Family Achievement Center offers kids a fun, low-stress place to work on gross motor skills. Our clinic includes a gym designed just for kids along with a hydrotherapy pool!
